

VINCI SA – Commitments

VINCI’s environmental ambitions cover three main areas:

PRESERVING NATURAL ENVIRONMENTS

As the projects we build or manage have a direct or indirect influence on natural environments, protecting these environments plays a key role in our design, construction and operations processes. Throughout the project life cycle, the Group’s entities strive to have as little impact as possible on natural environments, and to develop solutions to conserve fresh water resources and restore ecological balance.

OPTIMISING RESOURCES THANKS TO THE CIRCULAR ECONOMY

Natural resources, including some that are essential to VINCI’s business activities, are becoming scarce. The Group intends to limit its impact by moving towards a circular economy. This includes improving our design and production processes, reducing extraction of virgin raw materials, implementing efficient techniques, adopting effective behaviour patterns, and reusing and recycling.

ACTING FOR THE CLIMATE

VINCI is active in sectors that contribute significantly to climate change: transport and construction are responsible for over 50% of greenhouse gas emissions each year. And these sectors are acutely exposed to the risks arising from climate change. This is why the Group is taking action to limit the future consequences of climate change, by setting an ambitious target to cut its gross emissions and working towards it throughout its value chain.
